PART#: USB-EXC2 Ingram SKU#:Q39399 Synnex SKU#:1988219

Description :

One of the biggest obstacles encountered in planning a wire run is the signal limitation of USB devices. With a maximum guaranteed length of 16 feet, very few USB runs are successful without the use of ACTIVE extension cables. These are M/F extension cables which feature a booster-box on the end, and when strung together, can achieve a new maximum of 80 feet. Easily extend your USB 2.0 cable past 5 Meters by daisy chaining up to five of our premium USB 2.0 active extensions. These USB 2.0 compliant cables support data transfer rates up to 480Mbps and are fully backward compatible with both low and high-speed USB v1.1 devices.
